Printed Page: 1 of 1

Subject Code:BP104T

Roll No:

BPHARM**(SEM. I) THEORY EXAMINATION 2025-26
PHARMACEUTICAL INORGANIC CHEMISTRY****TIME: 3 HRS****M.MARKS: 75****Note:** Attempt all Sections. In case of any missing data, choose suitably.**SECTION A****1. Attempt all questions in brief.****10 x 2 = 20**

a.	Describe the functions of Oral Rehydration Solution (ORS).
b.	What is meant by pharmacopoeia, and who is regarded as its father?
c.	Explain the composition of zinc eugenol cement.
d.	State the principle behind the limit test for chloride.
e.	What are expectorants? Give appropriate examples.
f.	List the uses of astringents.
g.	Explain the role of thioglycolic acid and citric acid in the limit test for iron.
h.	What are the uses of cathartics and laxatives?
i.	Define anticaries agents and provide examples.
j.	Write the composition of the barium sulfate reagent.

SECTION B**2. Attempt any two parts of the following:****2 x 10 = 20**

a.	What are emetics. Write the method of preparation, properties, uses and assay of copper sulphate.
b.	Give a detailed account of the development and history of the Indian Pharmacopoeia and British Pharmacopoeia.
c.	Describe the principle, procedure, and apparatus of the arsenic limit test in pharmaceutical analysis.

SECTION C**3. Attempt any five parts of the following:****7 x 5 = 35**

a.	What are Haematinics? Describe how Ferrous sulphate is prepared, along with its properties, methods of assay, and its uses.
b.	Summarize the various sources of impurities in pharmaceutical substances, providing suitable examples.
c.	Classify antacids. Describe ideal properties and uses of antacids.
d.	Write down the principle, procedure, and uses of reagents in the limit test of heavy metals.
e.	Explain the method of preparation, properties, assay, and therapeutic uses of ammonium chloride.
f.	Define the term half-life of radioactive material. What are the units of radioactivity?
g.	Explain how antimicrobial agents work and their classification.
