MBA
(SEM IV) THEORY EXAMINATION 2022-23
INTERNATIONAL LOGISTICS

Time: 3 Hours ***Total Marks: 100***

Note: Attempt all sections. If require any missing data; then choose suitably.

SECTION A

1. Attempt *all* questions in brief. **2 x 10 = 20**

a. Define International Logistics.
b. Explain Inbound logistics.
c. What is a Contract of Affreightment?
d. Define incoterm's standard.
e. What do you understand by multi-modalism?
f. Discuss the concept of trade-offs.
g. Define Maritime Routing Patterns
h. Explain the concept of containerization of commodities.
i. Explain the concept of transportation and commercial geography.
j. Discuss the concept of Reverse Logistics.

SECTION B

2. Attempt the following: **15 x 2 = 30**

CASE STUDY

In recent years, the containerization of commodities has revolutionized the international transport system, significantly impacting global trade and logistics operations. One such case study is the Port of Shanghai, which has experienced tremendous growth and transformation due to the implementation of containerization.

The Port of Shanghai, located in China, is one of the busiest and largest container ports globally. With the introduction of containerization, the port has witnessed a remarkable increase in efficiency and throughput. Containers provide standardized units for transportation, allowing for seamless intermodal transfers between different modes of transport such as road, rail, and maritime.

One of the key benefits of containerization is the improved security and protection of goods during transit. Containers are sealed and provide enhanced security measures, reducing the risk of theft and damage to goods. This has led to increased trust and reliability in international trade, attracting more businesses to utilize the Port of Shanghai for their logistics operations.

Furthermore, containerization has led to significant cost savings in international transport. Standardized container sizes and handling processes have reduced the time and labor required for loading and unloading cargo. This has resulted in shorter turnaround times, improved vessel utilization, and reduced transportation costs for businesses.

Answer any TWO of the following:

a. Discuss the significance of transportation services in international trade, with a specific focus on the impact of containerization. How has containerization transformed the efficiency and reliability of global logistics operations?

QP23EP1_311 | 15-06-2023 14:01:37 | 115.243.172.58

b. Analyze the characteristics of different modes of transport, namely road transportation, rail transportation, maritime transport, and air transport, in the context of international trade. Discuss the advantages and limitations of each mode and their role in the international transport system.

c. Evaluate the technical performance and transport economic indicators used to assess the efficiency and effectiveness of the international transport system. Discuss the key indicators and metrics used to measure the performance of ports, such as the Port of Shanghai.

SECTION C

3. Attempt any *one* part of the following: 10 x 1 = 10

a. Discuss the factors driving global supply chain management. Explain how factors contribute to the globalization of supply chains.

b. Explain the concept of global logistics operators. Discuss the role and functions of global logistics operators in facilitating international trade and managing global supply chains.

4. Attempt any *one* part of the following: 10 x 1 = 10

a. What is the role of International logistics Operators? Discuss the criteria for selecting an international logistics operator.

b. Analyze the importance of selecting the right third-party logistics operator in the management of the global supply chain. Discuss how this decision impacts supply chain efficiency and customer satisfaction.

5. Attempt any *one* part of the following: 10 x 1 = 10

a. Analyze the considerations of speed, frequency, packing, and insurance in international transportation. Discuss how these factors impact the overall efficiency and cost-effectiveness of international logistics operations.

b. Explain the concept of a demand-driven supply network in international logistics. Discuss the key principles and benefits of adopting a demand-driven approach in managing global supply chains.

6. Attempt any *one* part of the following: 10 x 1 = 10

a. Discuss the characteristics and features of rail transportation as a mode of international transport. Explain the advantages and limitations of using rail for global logistics operations.

b. Explain maritime transport and its significance in international trade. Discuss the factors that influence maritime routing patterns and the role of ports in facilitating global supply chains.

7. Attempt any *one* part of the following: 10 x 1 = 10

a. Explain the importance of traffic counts and traffic surveys in international transport planning. Discuss how these data collection methods help in assessing transportation demand, designing infrastructure, and optimizing transport operations.

b. Analyze the importance of international transport safety and security. Discuss the challenges and strategies involved in ensuring the safe and secure movement of goods across borders.
