MPHARM

(SEM. II) THEORY EXAMINATION 2025-26

ADVANCED ORGANIC CHEMISTRY-II

TIME: 3 HRS

M.MARKS: 75

Note: 1. Attempt all Sections. If require any missing data; then choose suitably.

SECTION A

1. Attempt all questions in brief.

2x10 = 20

- What do you understand by the 'atom economy' of a chemical reaction?
- Differentiate between homogenous and heterogeneous catalysts.
- What is the superheating effect in microwave-assisted reactions?
- Write the name and structure of any two linkers used in SPPS.
- What is t-BOC and Fmoc?
- Define the conrotatory and disrotatory process.
- What do you mean by supported catalysts?
- What do you mean by biocatalysts?
- How do you differentiate between stereo-selective synthesis and stereo-specific synthesis?
- Define optical purity.

SECTION B

2. Attempt any two of the following:

2 x 10 = 20

- Define green chemistry. Elaborate on all the principles of green chemistry in detail.
- Write in detail about t-BOC and Fmoc protocols with examples.
- Define racemic modification and explain various methods for the resolution of racemic modification.

SECTION C

3. Attempt any five part of the following:

7 x 5 = 35

- Define green chemistry. Elaborate on all the principles of green chemistry in detail.
- Discuss the merits and demerits of Microwave-assisted reactions.
- Explain Norrish reactions with suitable examples.
- Explain in detail the basic principles of photochemistry. Elaborate Jablonski diagram
- Discuss in detail the applications of Wilkinson catalysts & Ziegler-natta catalysts.
- Write a detailed note on elements of symmetry in an organic compound.
- Discuss stereoisomerism in biphenyl compounds.
